“Supporting cross border cooperation in the business environment and promotion of the region identity Dolj - Olt - Plevne - Vidin - Montana”

General objective:

Sustainable economic development of the region Dolj, Olt, Plevne, Vidin, Montana by promoting opportunities in the area to attract foreign investors

Specific objective:

Identify and promote the opportunities offered by the cross-border regions Dolj, Olt, Plevne, Vidin through specific measures and means.

The region covered by the project is a relatively low developed area with few sustainable business partnerships and business climate less developed. Investments are low, despite good geographical position and infrastructure opportunities- TEN-T, Danube river, airports, inter-modal transport facilities.

The project will contribute to strengthening cooperation between important competitiveness actors - ARoTT, as pole of technology transfer and business support services for Oltenia Region, National Centre for Information Service - Plevne, Regional Development Agency and Business Centre 2000 - Montana and Agency for Regional Development and Business Center - Vidin, as main organizations in there area to provide business services and information. Also, the ATeE will directly contribute, through members experience in business co-operation in cross-border area and strategy development to the success of the project.

Business representatives in cross border area will be *directly connected with interested investors* from the cross border area or international level, through networking facilities of the portal, as well as through the Regional Conferences and Exhibition organized. They will be able to present their products and services, identifying market niches and therefore, *increasing their exports*

Activities carried out are oriented to limiting cross border problems in business area, through *increased information, coordination and support facilities*- networking meetings, such as economic missions and workshops

Also, the project creates the instruments for *attracting business investors and improving their perceptions on the area*, by pointing out, through regional strategy for business and cross border portal and the promotion film of the region.

The project will create a dynamic relation between Romanian and Bulgarian cross border businesses, characterized by high competitiveness and technological innovations that will attract investors and sustain economic development in the area.

By implementing this project pursue to overcome barriers, build trust through joint participation and to identify the comparative advantages of the area, explore joint opportunities and identifying solutions to common problems and threats. All these will lead to a common development of border areas of socio-economic and integrated development, with a favourable regional identity.

Faculty of Automation, Computers and Electronics, Craiova

Details:

Faculty of Automation, Computers and Electronics in Craiova offers modern specializations in top domains of engineering sciences. According to the new policy of Ministry of Education, Research and Youth actions are taken for making Romanian education compatible with European education, considering Romanian's adherence to European Union.

Therefore, Romanian faculties will offer diplomas in few domains; an additional diploma will identify the disciplines studied so that the student can have a specialization in the domain he chose. This diploma will also mention how the candidates were selecting-exam or another selecting form. Faculty of Automation, Computers and Electronics in Craiova offers the possibility to study in four very attractive domains according to present and future tendency of national and international technological development. License studies are organized in four years curricula according to Bologna procedures.

Chronologically, from the moment of their appearance in faculty, these domains are:

- Systems Engineering,
- Computers and Information Technology,
- Electronics and Telecommunications,
- Mechatronics and Robotics.

Systems Engineering domain includes the following specializations:

- **Automation and Applied Informatics.**
- **Multimedia Systems Engineering.**
- **Computers**
- **Electronics**
- **Mechatronics and Robotics** is a relatively new - and therefore very modern domain, a strong multidisciplinary and applicative type. Mechatronics and Robotics are the specializations offered in this domain. The name itself - Mechatronics - indicates that integration of the knowledge in **Mechanics, Electronics, Computers and Automation** is studied here. All modern products use mechanical and electronic components, therefore computers and automatization algorithms are obligatory for producing and making them function.

From the academic and research facilities point of view, Faculty of Automation, Computers and Electronics in Craiova takes a privileged position within University of Craiova, in a positive sense, due to its surface and educational spaces endowment. Therefore, practical activities - laboratory works and projects - take place in more than 20 personal laboratories in two neighbouring buildings.

Contact:

The website of our faculty - www.ace.ucv.ro - represents a useful documentation source for those who want to know more about Faculty of Automation, Computers and Electronics in Craiova.

APLISOFT SRL Craiova

Details:

- APLISOFT SRL is a private company founded on the 24 th of August 1995.

The registered office is in Craiova, Dolj county and its object of activity is to create and supply economic software.

- At the moment, the firm has more than three hundred clients in the following counties: Dolj, Valcea, Gorj, Olt, Arges and also in Bucharest.
- The firm creates software for pawn firms, for the quantitative recording of the packing, web pages, as well as a software package which covers a great majority of the financial and accounting activities of a company.
- This software package is registered at the ORDA (The Romanian Office for Copyright) with No.13 / 2001 and gives the possibility to administer the activities, from current accountancy operations (invoicing, inventory, cash register, debts and credits etc.), salaries, the writing of assets up to statistics and reports demanded by the public institutions and banks.
- *APLISOFT SRL* is focused on the creation of software which is as ergonomic and user-friendly as possible by providing a maximum amount of information and reports.
 - » economical application for company containing:
 - » a general bookkeeping
 - » a quantitatively and qualitative administration
 - » a means of payment
 - » fixed means
 - » external discounts
 - » programs for book debtors of pawn-brokers
 - » web-design services (consulting, design)
 - » Internet distributed applications development on demand
 - » diverse services: installing operational systems, virus removing, data recovering

SC RO-Software House SRL

Details:

Our company's activity is based not only on the needs of an evolving market that integrates in the informational world stream and computational data processing field, but also on the necessity of implementing software solutions and applications specific for every activity. RoSoftwareHouse sets first and foremost its customers, in order to maintain and improve its leading role in delivery, implementation and consulting services on the software solutions market.

- The main activities developed by this company, are based on implementing dedicated software in the special communication field:
- GPS based - active monitoring and security solutions, for the merchandise and public, international and national, transport field.
- monitoring solutions in dispatch center, through radio frequency or GSM modems and GPS systems.
- video antiterrorism security systems with neural analysis
- digital payment solutions for taxi, extra-urban public transport, retail, super markets, bar & restaurants, change offices etc.
- dedicated software solutions for the internal management and financial administration of a company (commercial, production, transportation and leasing companies)

Establishing recognition through its professionalism and its respect for the clients and having a high level experience, reached during the years in the external and internal IT market, RoSoftwareHouse manages to be in a leadership role by delivering high quality products.

The main products include:

- Fiscal taximeter Taxitel 5000 and software solution for taxi financial administration "TAXI MANAGER"
- Fiscal pay desk XComm ST, designated to urban and external public transport, and software solution "BUS - MANAGER"
- The GPS - DVR 502 GPRS module

AUTOMATECH SRL

61, Al. Macedonski str; 200383, CRAIOVA, ROMANIA
automatech@clicknet.ro, www.automatech.xnet.ro

South West Romania, 200Km West from Bucharest, good road and railway connections, airport, 300 000 inhabitants

AUTOMATECH

Details:

- Using various families of 8 and 16 bit MCUs, with integrated peripherals, according customer needs, high performance, low cost, CPLD and FPGA circuits from Xilinx and Lattice for hardware integration
- Increased connectivity, using built in TCP/IP stacks or Serial to Ethernet bridging
- Multilayer PCBs design for digital and mixed mode circuits, rapid prototyping, SPICE simulation for analogue and digital circuits analysis

- Multi platform basic software development:
- Same GUI for both platforms (Linux, Windows) development:
- Embedded Linux for diskless applications
- Alternative solution: LabWindows CVI for Windows or Linux
- For our small and medium scale production, we co-operate with well technologically equipped electronics manufacturers
- Most of our production is exported in Europe
- CNC software and special hardware for custom machine tool
- We offer turnkey solutions for refurbishing and/or updating custom or general-purpose/standard machine tools, by integrating also:
 - equipments as motors and amplifiers (DC, AC, stepping) from Engelhardt GmbH
 - measurement systems (encoders, readouts) from RSF Elektronik(Austria).

ROMSIR

Details:

- Once reduced and completely stopped the BĂNEASA SA activity our company has assimilated all the major electronic components produced by Baneasa SA managing to cover the necessary parts for products that use these components.
- For this reason, ROMSIR participated in 2007 and 2008 in many national exhibitions, exclusively for the promotion of products that use clean energy sources.
- At this point ROMSIR has distributors through out the country. They received training and practical demonstrations at the installation and maintenance of our society products. Thus they are able to install and make operational all imported ROMSIR systems currently providing over 70% of the power electronic components for the entire market in Romania.

Over the years ROMSIR become a viable replacement of IPRS Baneasa SA.

ROMSIR obtained :

- » the quality management system certification ISO 9001
- » environmental management system ISO 14001
- » management system of occupational health and safety
- » OH SAS 18001:2008 management system of social accountability SA8000: 2008.

In July 2010 the government launched theGreen House for the population attended by both teams and by mounting its own distribution network with over 600 solar installations.

Our company offers simple and effective solutions to all those concerned about increasing energy prices, home maintenance costs and the negative impact of climate change on the environment.

Our offer includes a wide range of solar panels and accessories used for domestic water heating, swimming pools or can be connected to central heating system. Our solar panels can be successfully integrated applications both residential and commercial.

Also our company also sells and heat pumps, street lighting poles with solar panels, LED lighting and wind turbines.

Information about each of our products, technical characteristics and operation are available here.

If you need additional information about solar panels or recommendations for choosing the right solution to your needs, read our set of useful information or contact our team

ICPE

Details:

- Today, Icpe represents a complex structure, covering a wide range of innovative concepts, in the field of electric engineering. The main activities are focused on research, development, engineering, OEM fabrication of innovative products and services.
- **The main thematic domains**
 - » Renewable energy
 - » Energy saving
 - » Electric apparatus with vacuum commutation
 - » Special electrical cables with Teflon insulation
 - » Special electrical machines
 - » Servo-control
 - » Electric vehicles
 - » Industrial automation components
 - » Electrotechnologies
 - » Product testing
 - » Material characterization
 - » Products
 - » Renewable energy productive systems (photovoltaic, solar-thermal, wind, biomass, cogeneration, hybrid)
 - » LED City light systems (on grid and PV stand alone)
 - » Electrical apparatus:
 - » Vacuum contactor
 - » Breakers
 - » Switchers
 - » Medium voltage fuse-links
 - » High speed fuse-links
 - » Special electrical machines
 - » Brushless Servomotors
 - » Actuators
 - » Torque motor
 - » Electric machines transducers (resolver, RVDT, microsym, tachogenerator)
 - » Electric generator
 - » Customized products (frameless, coreless, linair)
 - » Servo-systems
 - » Servodrives
 - » Electric vehicles propulsion systems
 - » Special electrical cables
 - » Bipolar cables
 - » PE, Teflon coaxial cables
 - » Underfloor heating cables
 - » Halogen-free cables
 - » Loss detection cables
 - » Multiconductors

- Services
 - » Customized product research and development
 - » Consulting - for feasibility studies, achievement of financing and project management documentation
 - » ESCo - Integrated Energy Services
 - » Metrology and testing of electrical products in accredited laboratories by RENAR
 - » „In-site” noise measurements, EMC and termography performed by the Mobile Laboratory
 - » International cooperation
 - » Publishing house
 - » Organization of scientific events and exhibitions

A big part of ICPE's products are patented, being presented to various international exhibitions (Bruxelles, Geneva, and Moscow). In 2009 and 2010 these patents obtained 12 medals including 8 gold medals and 4 silver medals. Based on an elite team, ICPE was and is deeply involved in national and international programs to promote technologies for sustainable development.

ICMET

Details:

- **ICMET Craiova is the national leader in the field of:**
 - » Research, Development and testing for high voltage and high power equipment
 - » Research, Development for monitoring and diagnosis of the electrical power equipment
 - » Unconventional technologies using the effect of the vibratory stress relief
 - » Unconventional technologies using the effect of the compressed - air at supersonic velocity
 - » It is the only manufacturer of force and mass measuring transducers and equipment for heavy industrial duty based on magnetoelastic strain gauging, the result of its own research within interdisciplinary group CERTENSMAG
- **ICMET Craiova :**
 - » Has national metrological standards for the range of high forces (1 - 32 MN) and high voltages (alternating and continuous voltages, lightning and switching impulses)
 - » Has laboratories nationally accredited by :
 - » **RENAR** for High Voltage Testing, High Power Testing, Electromagnetic Compatibility and Low Voltage Testing
 - » **DKD** (German Calibration Service) for High Force Calibration, High Voltage Calibration and Electromagnetic Fields Calibration
 - » **DATech** for Dielectric Tests of High Voltage Electrical Appliances and Components, High Power Tests for High Voltage Equipment and Components and Low Voltage Equipment and Electromagnetic Compatibility
 - » **VDE** Testing and Certification Institute certifies the qualification of Electromagnetic
 - » Compatibility Laboratory for “Test Data Acceptance Program” in the field of EMC
 - » Participates in the activity of international scientific co-operation by bilateral relations (Greece, Germany, Israel, Switzerland) and relations at European level (COPERNICUS, COST, PHARE, EUREKA).

INDAEL TRAC

Details:

- **Type of business:**
 Manufacturer - steel construction, assembly, wiring
 Distributor
 Importer
 Exporter
- **Quality Certifications:**
 ISO 9001. No. 599 issued by: SRAC
 ISO 14001. No.2127 issued by: SRAC

Activities:

INDAELTRAC SRL - manufactures electronic and electrical power equipment, for the following areas:

- **TRACTION**
 - » Static converters for supplying auxiliary services (trolleybus, tram, metro);
 - » Traction equipment (AC and DC) for tram, trolley, subway.
- **MINING INDUSTRY**
 - » Frequency converters with a power from 22 kW to 250 kW
 - » Static converters for starting the rotor winding, rotor induction motors with a power from 100 kW to 1000 kW.
- **ENERGY INDUSTRY**
 - » Battery charging equipment and DC power consumers;
 - » Static excitations.
- **OTHER APPLICATIONS**
 - » Automation equipment;
 - » Welding equipment
- **Products and services:**
 - » **Rotating electrical machines, alternators, dynamos and converters**
 - » DC converters, AC
 - » Converters DC-DC
 - » Static converters
 - » Static Inverters
 - » **Rectifiers, reactance and induction coils**
 - » Rectifier, with bridge
 - » Rectifiers, with semiconductor
 - » Rectifiers, voltage and current stabilizers.
 - » Welding Rectifiers
 - » **Control devices, electric starters and regulators**
 - » Controllers for trams and trolleybuses
 - » **Electric and electronic relays, classified by type**
 - » Electrical switches Relays
 - » **Electrical and electronic instruments for measuring, monitoring and control for various applications**
 - » Modulators for electrical measurements or chopper
 - » **Electronic welding machinery and equipment for metals**
 - » Electronic welding machinery, for metals
 - » **Electrical and electronic products for industrial use.**
 - » Rectifiers, reactance and induction coils

Vovas Ltd.

Details:

- Field of activity: Trade and construction
- The company "Vovas" Ltd. - town Vidin is established in 1992 and more than 19 years provides effective solutions for construction, reconstruction and interior design. The company produces dry glues and coats "fasadecor" (tile adhesive, fiber adhesive for hydro insulation, outdoor coat "Bavalit", internal plaster "Spanish wall". The company has a shop for construction materials, where are offered products of "Austroterm Bulgaria", "Orgahim" Ruse, "Ceresit", interior and armored doors, everything for the bathroom, dye computer "Orgachim". The company offers own transport and construction works, including thermo renovation of buildings. Another activity of the company is dry-cleaning - the only one in Vidin.
- The company has a shop for construction materials and hydro-insulation, renovation and hydro and thermo insulations. It produces dry and liquid construction materials, coats, adhesive dyes, grunts, floor adhesives. It also provides tailor-made solutions with different parameters of strength and timing according to the specific needs of the clients. The construction team of the company can do renovations, thermo renovations of buildings, gypsum coating, design and decoration of buildings and yards.

ET "SOT GSM" Vidin

Details:

- Field of activity: Security
- Security through GSM signal, provided by SOT-GSM is a revolutionary technology solution of the inventor from Vidin, who succeeded in developing and manufacturing in 2005 a security technology with proven high effectiveness based on GSM phones and providing 24hours of security and access of buildings. The security system SOT-GSM is appropriate for living and commercial sites in near or remote region. When the secured site is entered by unauthorized way the client receives a signal for trespassing. The information arrives in real time. The system provides also the additional options of: powerful sound signal, enlightening of the site, video surveillance. SOT-GSM has the technical capacity to be installed on already existing security systems, giving a gsm signal directly to the client. Also on the territory of Vidin and Vidin region it is possible for the clients to react to the signal with the help of other security companies. The signal provides the opportunity to listen to what's happening at the site at the moment of eventual breaking in. The technology works with SIM cards of all mobile operators and has own power mode in case of cutting off the electricity.

AVA Sport Ltd.

Details:

- Field of activity: production of products and accessories for paragliding
- It was in 1993 when the designer of AVA Sport - Angel Stamenov, skydiver with more than 2000 jumps and a pilot with more than 24 years of experience, started to develop new and unconventional for the time being paragliding harness' designs. The progress in the design continues in the years to follow and as a result the "Tangra" harnesses appear on the market. Both the designer and the technologist - Maria Philipova, are active paraglide pilots, which contributes to the perfect match of comfort and quality production. The current trends in the fashion and the demand determine the outlook of the harnesses. And finally, a well- designed harness is more secure to the pilot. The belt system is designed in such a way that it's comfortable for both take-off and flying. AVA Sport is equipped with new and contemporary machinery deploying CAD-CAM technologies. All of the AVA Sport articles are made of high quality materials of the world leading manufacturers. The company sells its products in over 30 countries - Argentina, Austria, Brazil, Croatia, France, Germany, Japan, South Africa, USA etc.
- Description of activity (products and / or services): harnesses, backpacks, accessories, parachutes.

Cross LTD

Details:

- Field of activity: bicycle manufacturing.
- Cross LTD is a Bulgarian Company established in 1995 specialized in bicycle manufacturing. Both brands - Cross and Crosser are registered trade marks for our bikes and wheels. We have a designer's team in house, which responsibility is to develop a wide range of new models every year. Keeping the brand identity of each model is the designers' first priority. They achieve this through creating conceptual elaborations, engineering and graphic designs which are intellectual property of Cross LTD. All used components are supplied by well known companies like SHIMANO, SRAM, SUNTOUR, KENDA, PROMAX, SELLE ROYAL, VP COMPONENTS, HERRMANS, VELO, HL CORP. etc. The basic parts we use - frames, forks, brakes, hubs etc. are light weight aluminum. The exceptional quality of the Crosser wheels has been gained by using the double wall alloy profile and Robot machine for wheels assembling. By painting the wheel and the frame in the same color we achieve the unique and complete look of each bicycle. Some models we assemble with dynamo hubs and some of them are with inner gear, roller brakes etc.

Cross' bicycles belong to the middle range bicycles and some of the models are equipped with Shimano Deore gear group and Shimano BR - M485 hydraulic disc brakes. Cross LTD produces around 200 000 bicycles per year. About 90% of them are exported to West European countries - UK, Holland, Germany, Austria, Switzerland, Italy etc. By the words of our business partners, the great advantages of Cross' bicycles are their high quality combined with the original design gives them a unique look and increases the interest in Cross' products.

"Triada engineering" Ltd.

Details:

- Field of activity: design, manufacture and metal structures assembly.
- Triada Engineering was founded in 1990 with main business activities in design, manufacture and metal structures assembly. The company has been closely specializing manufacture of space frames, representing a major part of the completed roofing structures. Apart from space frames the company has also been manufacturing conventional metallic structures for industrial and public buildings, such as plane frames, frameworks and unique constructions for some small architectural forms. Another tendency of the company's marketing policy is the delivery and the assembly of roof- and wall panels (PUR panels), which are needed for the construction of trading and industrial buildings. The panels with polyester- and PVC cover are especially appropriate for facing the walls of food industry's buildings. The following Triada engineering's manufacturing facilities are now available: machine shops, assembly shops and sheltered warehouses. The main production facility has been pretty well equipped with all necessary machines, needed for production of metal structures and products. Apart from the manpower staff, there is also instantly operating design and technological department available at Triada engineering. "Triada engineering" is certified by the quality management system ISO 9001:2008.
- Description of activity (products and / or services): Space frames - Rods of tubular cross section, screwed by axial screws to the joint heads, compose the space frame structure. The entire structure is featured with high grade of plant completion, quick and easy assembly, as well as modular assembly. Overcoming of large size spans, complicated plan configuration and interesting flexible solutions are also provided. The entire structure is also featured with higher reliability due to the highest grade of monitoring over the products quality control. It has been widely used in all fields of industrial and civil works for production of industrial buildings, warehouses, sporting halls, exhibition pavilions, shops, canopies and etc.; In section traditional metal constructions are included all steel structures made from frame elements: frames, pillars, purlins, beams etc, or lattice elements: plane and space trusses, lattice columns. In most cases with this type of structures are built single span buildings and multiple span buildings with different spans and distance between columns along the building 3-12m. They are suitable for the construction of industrial and public buildings, agricultural buildings such as cattle-sheds, pig-breeding farms, poultry-farms etc.
